

Ver-tech Labs

“Solutions for our Future”

Ver-tech Labs (VTL) is pleased to announce its *Extreme Green Line* of environmentally friendly car care products.

VTL’s line of “Green Products” are:

- **Biodegradable**
- **NPE and APE free**
- **Phosphate free**
- **VOC compliant**
- **Ozone friendly**

Ver-tech Labs has been committed to environmental responsibility and earth-friendly formulations of all of our products, from car wash to industrial products. Ver-tech Labs follows the guidelines of the EPA’s Design for the Environment (DfE) Program when formulating our car wash products. DfE is a voluntary partnership to reduce risk to people and the environment by preventing pollution. As part of that partnership, VTL is a member of the CleanGredients® program, a database of institutional and industrial (I&I) cleaning product ingredient chemicals that are safe for the environment.

Ver-tech Labs commitment to the environment extends beyond product formulations and ingredients to other areas of our business. Among the things Ver-tech Labs has done are:

Environmentally Responsible Manufacturing Practices. Ver-tech Labs was recently recognized by the Minnesota Technical Assistance Program (MNTAP) for wastewater reduction and chemical recycling.

Container Recycling. Ver-tech Labs believes in using recycled containers. We currently have a drum washing system in place to wash and re-use existing containers to get them back into circulation. In the course of a year, virtually all the drums we sell are recycled.

As a car wash owner or manager, you can be assured that when you are using the *Extreme Green Line* you are doing your part to be a good steward for our environment.

All of our green products will have *Extreme Green* noted on the label so that they can be easily identified.
